The oil trade is a very important and lucrative business. Flour is sold in Hsining. The taxes imposed on the mills are very heavy, but the monasteries still enjoy the old privilege granted before 1723, and are exempted from these taxes. Even families in which a Living Buddha has been born enjoy the same privilege, for instance, the Lan family living in Hung nai tzu Valley. Every year, however, the family has to offer 10 pounds of oil at Erh-ku-lung to the intendancy of its Buddha, deceased a century ago. The lamas claim the privilege, which was granted during the Yung lo period (1403–1424), because oil is consumed in the lamps of the temples before the Buddhas, and flour is used by the lamas, the servants of Buddha.

FORESTS

Only two monasteries possess extensive forests—Seerkok and T'ien-T'ang. Because wood is very scarce in the northern part of the province, forests are an important source of revenue.

TOLL ON BRIDGES

The history of the famous bridge of T'ien T'ang has been recorded. For many years it was a source of large revenue, which finally caused its ruin.

792 434 [494]

The monastery of Kan-ch'an, belonging to the famous Tenma, receives toll on a raft, which ferries passengers across the Ta-t'ung River. Tenma is a very well-known man in the country. His first incarnation, a learned man, was appointed Fa-t'ai in Erh-ku-lung by the first Chang-chia (Huth, p. 279). It is related that he caused the ruin of Erh-ku-lung. In 1723 bLo-bzan bstan-dsin, chief of the revolt, was a prisoner in Hsining, and about to be executed. He heard that Tenma was in the city. Through the guardians of the jail, he implored him to write a letter to the Chinese generals in order to save his life. Tenma, unaware of the consequences of such an act, wrote the letter. The generals got the impression that Erh-ku-lung was mixed up with the revolt, and they destroyed the monastery. This is a fine story, manufactured on the ground out of whole cloth, in order to free the old mother monastery from blame, but why was the blame put on Tenma?

505 175

For many years during the period of my stay, the young Tenma, swelling with ambition, was the most talked-of man in the country for his audacious plan to construct a European suspension bridge over the river, like those in photographs he had seen in magazines. He started buying all the available iron in the country, felling all the big trees growing on the domain of the monastery, and building a large brickyard. Blacksmiths, carpenters, and bricklayers worked for four years. He built four great towers, two on each side of the river. The blacksmiths made enormous iron chains, too heavy to manipulate or to move. He exhausted the entire treasure of the monastery. Troubles started

N *563 M 233 463 [466] because of the value of the animals entrusted to them. They are skillful in breeding, and in finding the best pasture. A shepherd is treated as a member of his employer's family; he receives the same food, and the daughters-in-law must show him the same respect they accord to the head of the family.

The Mongours hunt foxes, hares, pheasants and musk deer, using guns, traps and poison. The fox skins are sold to Chinese merchants and the best skins, used for lining the winter garments of the rich, bring a handsome price. Musk deer are also valuable game. The precious musk glands, used as a special drug or as an essence in perfume, are sold by weight to Chinese dealers.

N *563 M 224 439 Fishing is important in Koko Nor, where the lake produces an abundant supply. Mongour expeditions go there as soon as the lake has frozen over each winter. They go first to the chief of the Mongol or Tibetan tribe on whose shore they plan to operate, and present gifts such as wine, tobacco, noodles and the traditional ceremonial scarf of felicity in exchange for permission to fish and protection from the tribe. The fishermen usually go to the same territory every year, and become sworn brothers of the chief or some important local nomad. The expedition, which lasts about two months, involves hard work in the bitter cold, but the profits are sufficient reward. Preservation of the fish is no problem; they freeze immediately after they are caught. They are carried to the market in Hsi-ning, or sold to Moslem merchants who engage in caravan trade.

N *563 M 438 439 Mongours carry on their trade largely with Chinese and Chinese Moslem merchants. The Moslems are an energetic and enterprising people who drive caravans of pack mules from house to house in the Mongour country, exchanging cloth, needles and thread for wool, skins, eggs and grain. In the autumn they collect oxen and sheep and drive them in small herds to Hsi-ning. The Chinese merchants do business on a larger scale. They send their representatives to pitch tents and display their wares at lama monastery festivals and at the annual celebrations and meetings of the Mongour clans. During the fall, when the Chinese Moslems are buying up sheep and oxen, the Chinese butchers of the cities send their agents to the Mongour villages to buy hogs. Chinese merchants also send their buyers into Mongour country for wool and skins, going from home to home. There are also peddlers, who deal largely in items needed in the Mongour home, such as needles, colored thread, cotton cloth, cheap jewelry, sugar and pipe tobacco. Business is always by barter, with the top-ranking woman of the Mongour household doing the bargaining. As the peddler travels a long distance, it is customary to provide him with a place to sleep. Before he leaves he presents the hostess with a small token of apprecia-

tion for her hospitality. Larger scale selling and buying are done at fairs held two or three times a year.

Occasionally an ambitious young Mongour will go into the business of long-distance caravan trade with the Tibetans. He will deal largely in mules and saddle girths woven with white wool, which can be sold readily in Tibet, and bring back wool serge cloth dyed red or purple, or white with red or blue stripes. A heavy fabric, it sheds water, and is highly valued by the Mongours. He will also bring back Tibetan incense, dates and so forth to sell to the Chinese.

6. Work and leisure

The traditional life of pastoral nomads is rather free and lazy except at the times of seasonal migration. Descendants of nomads, the Mongours still prefer to enjoy long periods of comparative idleness alternating with short periods of intense activity. In their agricultural economy, however, the Mongour men are unable to be quite so indolent as pastoral nomads.

N *563 M 462

In the farming communities, both men and women work in the fields. The men do the heavy preparatory work, plowing and harrowing; the women help with sowing and weeding, as well as with reaping the harvest and carrying the grains to the threshing floor. Women do the threshing. Like their Mongol sisters, they do the housework and care for the animals. Married women work under the supervision of the oldest, usually the mother-in-law.

N *563 M 562 M [574] M [437] [533]

Although their status is inferior, the Mongour women accept it without resentment. Their outlook is conditioned by their milieu. They know what is expected of them, and behave accordingly. Though bound by strict rules of etiquette, they are entirely free to associate with men, to sing and dance in public, and to enjoy themselves. They delight in attending the big festivals at the lamaseries and the annual assembly of the clan, where they meet their friends and visit, and also show off their fancy costumes and headdress. They love to shop at the fairs, and bargain over goods. Both men and women love to sing. During the long, tedious hours of weeding the fields, men and women sing in unison.

G. The Tibetans

1. The people

Hsi-fan is a name applied by the Chinese to the Amdo Tibetans, and to all other non-Chinese tribesmen from Sung-p'an to Hsi-ning. It means Western Barbarians. Some European scholars have maintained that the Hsi-fan are not Tibetans, and suggest that they represent a northern branch of one of the non-Chinese peoples of southwest China, like the Lolo or Moso.
